

113 Election Campaign and Lobbyist Reporting

Functional Group ID=**CL**

Introduction:

This Draft Standard for Trial Use contains the format and establishes the data contents of the Election Campaign and Lobbyist Reporting Transaction Set (113) for use within the context of an Electronic Data Interchange (EDI) environment. This Bi-directional transaction set can be used by candidates, candidate committees, party committees, political action groups, lobbyists and other entities to exchange disclosure data.

Notes:

- 1. Registered lobbyists in the state of California can use this transaction set to submit California 1990 form 615 (Lobbyist Report).*
- 2. This IC can be used to amend previously submitted data. The amended data is a total replacement of the form.*
- 3. Throughout this implementation convention, reference is made to segments and data elements within this transaction set. Segments are identified in the following manner 1/NM1/0700. The first number identifies the table that contains the segment. The 2 or 3 characters between the slash marks identify the segment (in the example, NM1 identifies the Individual or Organizational Name segment). The last 4 numbers identify the position of the segment within the table. Thus, 1/NM1/0700 identifies the Individual or Organizational Name segment in table 1 at position 0700.*
- 4. A combination of the segment identifier and the position of the data element within the segment, e.g., BGN06 identify data elements within segments. BGN identifies the Beginning Segment and 06 identifies data element 127 which is the sixth data element within the BGN segment.*
- 5. Composite data elements are identified in a manner similar to data elements, e.g., AWD01-04. AWD identifies the Amount with Description segment; 01 identifies composite data element C007, which is the first data element within the segment; and -04 identifies sub data element 935, which is the fourth sub data element within the composite data element C007.*
- 6. This transaction set contains segments and data elements that by the X12 standard are mandatory. A mandatory segment is identified by an "M" in the Requirement Designator field within the transaction set table and by the word "MANDATORY" in the Usage row on the segment page. Data elements that are mandatory by the X12 standard are identified by an "M" in the first column under the ATTRIBUTES on the segment page. Mandatory segments **MUST** be present in all transmissions of this transaction set. Mandatory data elements **MUST** be present in all mandatory segments and in those optional segments that are used in the transaction set.*
- 7. This transaction set also contains segments and data elements whose uses are optional by the X12 standard. These segments and data elements are identified in a similar manner as are the mandatory segments and data elements except an "O" is displayed in lieu of an "M" and the word "OPTIONAL" is used in place of "MANDATORY". Optional segments and data elements may be used at the discretion of the originator of the transaction set except when the words "MUST USE" are present. In this instance, the segment or data element **MUST** be present in the occurrence of the illustrated HL loop in which the annotation appears.*
- 8. This transaction set contains segments and data elements that are optional by the X12 standard but are **REQUIRED** by this implementation convention under specified conditions. In this instance the word "REQUIRED" will appear in a note associated with the segment or data element and the condition requiring the use of the segment or data element will be specified in this note. Use of the segment, data element or code are **REQUIRED** whenever the specified condition is present.*
- 9. This transaction set contains a HL loop (which includes all segments 2/HL/0100 through 2/MTX/3500) in table 2. This HL loop is used to transmit data applicable to a form or schedule and to categorize that data.*

10. Within this 113 transaction set there is only one HL loop identified in table 2, however, this loop may be repeated an infinite number of times. For ease of understanding this implementation convention, the data required by each form or schedule is identified in a separate illustrated HL loop. The illustrated HL loops identify the segments, data elements and codes that are to be used to provide the data required by the form or schedule. The illustrated HL loops can be identified by their position numbers within the transaction set. The HL loop within this 113 transaction set starts at position 2/0100 and ends at position 2/3500. Each segment in the HL loop is at a position that is incremented by 100 from the HL segment, e.g., the second segment in the HL loop is at position 2/0200. Each of the segments in the illustrated loops is incremented by 1 from the segments in the basic HL loop, e.g., 2/0101 through 2/3501, 2/0102 through 2/3502, etc. Notes that appear in these illustrative loops will refer to segments by their ACTUAL positions within the X12 transaction set, NOT by their illustrated positions.

11. Each HL loop that starts a form or schedule MUST cite code RP (Report) in HL03. There may be other HL loops within a form or schedule. Each of these loops will cite a code other than RP in HL03. Each code listed in HL03 may be used ONLY one time in each HL loop that transmits data for a form or schedule. All HL loops MUST be numbered consecutively in HL01 throughout the entire transaction set.

12. Codes listed in data elements are the only codes that may be used in that data element.

13. Instructions regarding the use of this transaction set to comply with the reporting requirements of the California Secretary of State's office will appear as italicized, bolded, shaded text. Any other text that appears within this transaction set is part of the X12 standard.

14. Segment syntax and semantic notes are part of the X12 standard and MUST be complied with.

15. This IC accommodates all the instructions for completing a form.

Transaction Set Notes

- 1/0500 The LQ segment provides coded information related to a filing, such as, a notice of a late filing.
- 1/0700 The NM1 segment provides name and address information regarding the sender and receiver of a filing.
- 1/1300 The AWD loop provides monetary amounts covering fees and related information associated with a late filing.
- 1/1400 The LQ segment provides coded information related to the monetary amounts carried in the AWD loop.
- 2/0100 The HL loop divides a filing into sections such as basic report information, loans, contributions, receipts, expenditures, related parties and other information contained in a filing.
- 2/0500 The LQ segment provides coded information related to an individual report identified in the N9 segment.
- 2/0700 The NM1 segment provides name, address and related information for reportable entities, such as filers, committees, committee officers, and contributors.

- 2/2100 The LQ loop provides coded information, such as, type of committee, last office held by a candidate, and other information about the entities identified in the NM1 segment.
- 2/3300 The LQ segment provides coded information related to the monetary amount carried in the AWD segment as reported for the entity identified in the NM1 loop.
- 2/3400 The N1 segment provides the name of an entity who benefited from an expenditure made by a party identified in the NM1 segment.

Segment: **HL** Hierarchical Level
Position: 0100
Loop: HL Optional (Must Use)
Level: Detail
Usage: Optional (Must Use)
Max Use: 1
Purpose: To identify dependencies among and the content of hierarchically related groups of data segments

Syntax Notes:

Semantic Notes:

- Comments:**
- 1 The HL segment is used to identify levels of detail information using a hierarchical structure, such as relating line-item data to shipment data, and packaging data to line-item data.
The HL segment defines a top-down/left-right ordered structure.
 - 2 HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example, HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment and would be incremented by one in each subsequent HL segment within the transaction.
 - 3 HL02 identifies the hierarchical ID number of the HL segment to which the current HL segment is subordinate.
 - 4 HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order, or item-level information.
 - 5 HL04 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.

Notes: *This HL loop illustrates the submission of data required by California Form 615, Lobbyist Report.*

Notes:

When NM101 in the 2/NM1/0700 segment is code FN, use this segment to provide a verification statement.

3. The verification statement is identified by a code contained in the California Lobbyist Report Code List which is maintained by the Office of the Secretary of State.

4. All codes contained in the California Lobbyist Report Code List have the following structure: Two numeric characters to identify a section in the code list, followed by a hyphen, followed by 1, 2, or 3, alpha/numeric characters.
